WEST LAKE FOREST RESIDENCE

The West Lake Forest Residence can be followed from drawing to completion. The gallery moves from floor plans and elevations to a lit wood model, and ends with photographs of the finished house among bare trees, its landscape not yet planted. The design is a picturesque composition of steep gables and long, sweeping roofs, broken by dormers and bays and anchored by a tall chimney.

The model, photographed with light glowing through its windows, shows the house stepping down its site: a broad stair climbs to the main level, and garage doors open at the lower level beneath eaves carried on heavy timber brackets. The plans place a curved bay at the heart of the principal elevation, and deep eaves and divided windows run around the whole house.

As built, the walls are cream stucco over a brick base, with brick surrounds in a toothed pattern framing each window. A variegated slate roof, copper gutters and a copper-roofed bay window complete the exterior, and a deep entrance porch framed in heavy timber shelters the front door.
